

EUROBLAST SELECT

VARIABLE HEIGHT CABINET

Improved operator comfort allied to production efficiency is the prime objectives behind the Guyson Select variable height beadblaster; available only in Euroblast models sizes 4 and 6 and in either suction feed or pressure feed systems.

Ideal for multi-operator workshops, the cabinet height is adjustable electrically or manually. The automatic version provides vertical adjustment via ball screw and motor whilst the manual version raises and lowers the cabinet by means of hydraulic jack. A side mounted electrical panel is fitted on the automatic version.

Cabinet operators of a varied height can now conveniently adopt a completely relaxed standing position and avoid the discomfort caused by crouching and overreaching by personally being able to select their most comfortable arm access, viewing position and footpedal location via the floating pedal.

Options can include:

- Model 400 or 900 gun (SF) or both
- Pressure pot and Pressure Feed nozzle
- Armrests fitted to enlarged armholes
- Media catch tray below cabinet side door
- Beige rubber lining of cabinet
- Secondary perforated steel lower floor
- Blast gun air pressure regulator and gauge (with lockable cover)
- Airwash pressure regulator and gauge (with lockable cover)
- Electrical door interlocks safety switches
- Timed door Interlocks
- Control panel
- Earth bonding
- Fixed turntable - (painted or polyurethane coating option)
- Model 75/16 Cyclone Reclamator (free standing or un/motorised)
- Variety of dust collectors
